Specializing in Valves & Valve Automation Since 1983!

Model 735-55

Surge-Anticipating Control Valve with Solenoid Control

- Eliminates surge for all pumping system types:
 - Booster & deep well, single & variable speed
- Eliminates surge for all distribution network types:
 - Municipal, hi-rise buildings, sewage, HVAC, irrigation
 - Difficult to maintain, remote locations, older systems

The Model 735-55-M Surge-Anticipating Valve with Solenoid Control is an off-line, hydraulically-operated, diaphragm-actuated valve. The valve immediately opens in direct response to any power failure even prior to the pressure drop associated with abrupt pump stoppage. The pre-opened valve dissipates the returning high pressure wave, eliminating the surge.

The Model 735-55-M, sensing line pressure, smoothly closes drip-tight as quickly as the relief feature allows, while preventing closing surge. The valve also relieves excessive system pressure.

Features and Benefits

- Replaces surge air vessels
 - Relieves surge, fail-safe open
 - Minimal maintenance
 - Economy of space
 - Lower investment & maintenance costs
 - Especially economic for higher pressure ratings
- Solenoid controlled
 - Low-cost wiring
 - Wide range of pressures
- Line-pressure driven
 - No motor required
 - Adjustable hydraulic actuation
- Double chamber
 - Moderated valve closing (no surges)
 - Protected diaphragm
- In-line serviceable – easy maintenance
- Obstacle-free full-bore – uncompromising reliability
- Balanced seal disk – high flow capacity
