

Valve & Equipment Corporation

Specializing in Valves & Valve Automation Since 1983!

- Eliminating momentary pressure peaks
- Visual indication of system failure
- Filtration system burst protection
- Thermal expansion over-pressure relief
- System maintenance savings

The Model 73Q Quick Pressure-Relief Valve is hydraulically-operated, diaphragm-actuated, control valve that relieves excessive system pressure when this pressure rises above the pre-set value. It immediately, accurately, and with high repeatability responds to system pressure rise by fully opening. The Model 73Q provides smooth drip-tight closing.

Features and Benefits

- Hydraulic actuation
- Independent operation
- Long-term drip-tight sealing
- Long-term setting stability
- Wide-setting range
- Tight-setting window
- Minimal hysteresis
- Double chamber design
- Moderated valve closing (no surges)
- Protected diaphragm
- Obstacle-free full-bore – uncompromising reliability
- Balanced seal disk – high relief-flow capacity
- Manual test-valve – no setting change required
