Model 750-67

Level Control Valve with Modulating Vertical Float

- Reservoir filling
 - Low volume reservoirs
 - Large surface-area reservoirs
 - Hydraulic back-up
- Reservoir outlet
 - Reservoir level sustaining
 - Pump flow modulating

The Model 750-67 Level Control Valve with Modulating Vertical Float is a hydraulically-controlled, diaphragmactuated, control valve that controls reservoir filling to maintain constant water level, regardless of fluctuating demand.

The modified Model 75A-67, installed at reservoir outlet, sustains minimum reservoir level.

- Reservoir filling
 - Low volume reservoirs
 - Large surface-area reservoirs
 - Hydraulic back-up
- Reservoir outlet
 - Reservoir level sustaining
 - Pump flow modulating

Features and Benefits

- Line-pressure driven – independent operation
- Modulating hydraulic float control
 - “Always Full” reservoir
- Double chamber
 - Full-powered closing
 - Non-slam closing characteristic
 - Protected diaphragm
- External installation
 - Easy access to valve & float
 - Easy level setting
 - Less wear and tear
- Balanced seal disk – high flow capacity
- In-line serviceable – easy maintenance
- Flexible design – easy addition of features
