

Pinch Valve vs. Plug Valve

- ❑ **Heavy Duty Rubber Sleeve** – Contains flow and is abrasive & corrosion resistance
- ❑ **More Reliable** - Longer lasting, No freeze up due to infrequent operation
- ❑ **Less Maintenance** – No packing, No exercising required
- ❑ **Constant Operating Torque** – Operating mechanism not exposed to flow, No cheater bars necessary to operate
- ❑ **Larger Flow Area** - Passes larger solids, More energy efficient
- ❑ **Crushes and Seats Around Solids** – No solids build-up
- ❑ **Same Face-to-Face Dimensions** – As plug valves & gate valves 4” thru 12”
